

ABSTRACT

[[A]] The synthetic resin cap ~~according to the present invention~~ includes a cap body having a top plate and a cylindrical section extending downward from a periphery of the top plate; a circular inner seal projection formed on an inner surface of the top plate and fits into a container opening; and a circular opening edge seal projection formed on the inner surface of the top plate and contacts an opening edge of the container opening, wherein the opening edge seal projection ~~bends~~ is bent and ~~deforms~~ deformed in an expanding radial direction until contacting the cap body at the time of attaching the synthetic resin cap to the container opening, and wherein a positioning protrusion is provided on the top plate that contacts the opening edge when the opening edge seal projection ~~is bend~~ is bent and deformed until contacting the cap body. ~~The present invention provides the synthetic resin cap, a closing device having thereof, and a container-filled beverage.~~
